

You have made a decision for a product from Deutronic Elektronik GmbH - many thanks for doing so.

Please pay attention to the following advices:

- This solar battery charger may only be used with 12V rechargeable lead or lead-gel batteries.
- The solar batter charger does not require any particular service or maintenance. The solar cell with protective glass cover is embedded in a plastic laminate and a shock-proof frame. Despite this, knocking of the glass front and dropping of the solar battery charger must be avoided.
- The solar batter charger has an OBD2 connector for the OBD2 socket. **Attention:** different positions depending on vehicle type and model.
- The green STATUS LED in the frame of the solar battery charger will light up, displaying the function. An overcharging of the battery is excluded, thanks to the integrated electronics.
- Implied warranty is handled according to the legal regulations. Should you have any reason for complaint, please provide both the solar battery charger and the sales docket. No warranty is accepted for improper use of the solar battery charger or in the event of damage to the connecting cables.
